Harvest Clean Energy ETF

Interim Management Report of Fund Performance

June 30, 2026

Harvest Clean Energy ETF

CORPORATE OVERVIEW

Harvest Portfolios Group Inc. ("Harvest" or the "Manager") manages the Harvest ETFs and is a Canadian Investment Manager founded in 2009. Harvest is focused on developing investment products that follow three investment criteria.

We (i) endeavor to develop investment products that are clear in their mandate and easy for investors to understand, (ii) strive to be transparent so that our investors can review their financial reports and know exactly what they own, and (iii) seek to provide investors with consistent monthly income by investing in well-managed companies that have a steady cash flow and dividend-paying history.

MANAGEMENT DISCUSSION OF FUND PERFORMANCE

The interim management report of fund performance contains financial highlights but does not contain the complete interim financial statements of the Harvest Clean Energy ETF (the "Fund"). You can obtain a copy of the interim financial statements upon request, and at no cost, by calling toll-free at 1-866-998-8298; by writing to us at Harvest Portfolios Group Inc., 610 Chartwell Rd, Suite 204, Oakville, Ontario, L6J 4A5; or by visiting our website at www.harvestetfs.com; or on SEDAR+ at www.sedarplus.ca.

Unitholders may also contact us using one of these methods to request a copy of the Fund's proxy voting policies and procedures, proxy voting disclosure record, or quarterly portfolio disclosure.

INVESTMENT OBJECTIVES AND STRATEGY

The Fund's investment objective is to provide unitholders with the opportunity for capital appreciation. The Fund primarily invests in issuers that are engaged in clean energy related businesses that are listed on a regulated stock exchange in select North American, Asian or European countries.

To achieve its investment objective, the Fund will invest with equal weighting as a percentage of its net asset value, in the top 40 equity securities of issuers in the clean energy investment universe as determined and based on pre-established criteria set by the Manager of the Fund. The top 40 equity securities are ranked based on the market capitalization and in the determination of the Manager of the Fund have sufficient liquidity to meet the Fund's investment objective.

RISK

The risks associated with investing in the Fund are as described in the prospectus. There were no material changes to the Fund over the six-month period ended June 30, 2026 (the "Period") that affected the overall level of risk of the Fund.

RESULTS OF OPERATIONS

Overall Performance

The Fund's return by Class compared to the MSCI Global Alternative Energy GRTR (USD)[±] for the Period is as follows:

	Return %
Class A	11.52
MSCI Global Alternative Energy GRTR (USD) [±]	10.59

The primary reason for the divergence from the index is that the index is market-capitalization weighted and has a larger number of holdings over a greater range of company sizes. Meanwhile, the Fund rebalances back to an equal weight on a semi-annual basis and selects securities of the top 40 largest equity securities of issuers in the clean energy investment universe as determined and based on pre-established criteria set by the Manager of the Fund as measured by market capitalization and summarized below.

Factors Affecting Fund Results

The Fund recorded very good gains over the Period, carrying forward strong structural momentum throughout much of the Period on the back of long-term global climate investment goals, before surrendering a portion of those gains in June due to sharp corrections in solar equipment & services companies, along with Plug Power Inc. European clean energy operators, wind turbine manufacturers, and global renewable power generation firms - most notably Greenergy Renovables, S.A., Nordex SE, Verbio SE, and Cadeler A/S - contributed positively to performance, capitalizing on steady electricity demand and decent corporate performance.

Inside the breakdown of the solar equipment providers and services companies, which were down quite hard in June, names like SolarEdge Technologies, Inc. and Enphase Energy, Inc. bucked the trend and added to meaningful Fund performance. Meanwhile, names like Daqo New Energy Corp., Array Technologies, Inc., Canadian Solar Inc., Sunrun Inc., GCL Technology Holdings Limited, and Xinyi Solar Holdings Limited were an offset somewhat to drag on overall positive performance for the Period. This sub-sector retrenchment followed corporate earnings updates, shifting international trade and tariff narratives, and a reduction in domestic regulatory incentives under the current U.S. administration, which compressed industry multiples after a very strong 2025.

RECENT DEVELOPMENTS

Potential Impact for the Fund

The underlying index completed a comprehensive reconstitution and rebalancing cycle in January to realign the portfolio to the largest 40 names in the clean energy space. Six constituents were removed: CGN New Energy Holdings Co., Ltd., Xinyi Energy Holdings Limited, JinkoSolar Holding Co., Ltd., Clearway Energy, Inc., thyssenkrupp nucera AG & Co. KGaA, and PNE AG. They were replaced by six solar technology and specialized renewable equipment organizations: Nextpower Inc., Canadian Solar Inc., Shoal Technologies Group, Inc., Array Technologies, Inc., Metlen Energy & Metals S.A., and T1 Energy Inc.

Harvest Clean Energy ETF

Mid-Year Market Review

The first half of 2026 was characterized by heightened macroeconomic volatility, driven by a temporary but severe geopolitical disruption in the energy sector and shifting equity market concentration. Global equity markets demonstrated notable resilience amidst rising inflation and unemployment pressures in the first quarter. This transitioned into a broader market expansion during the second quarter as commodity pressures eased, and market leadership diversified.

These macroeconomic and geopolitical conditions were reflected across major indices, with the small-cap Russell 2000 leading equity performance with significant gains, making it a record first-half performance. The Nasdaq Composite advanced on the back of semiconductor hardware manufacturing, which offset weakness in mega-cap software names. Broad-market participation was further emphasized by equal-weighted indexes outperforming their market-cap-weighted counterparts, which faced headwinds from corrections among their largest technology constituents.

The Canadian equity market posted positive returns, supported heavily by an acceleration in financial stocks during the second quarter. In commodity markets, following the outbreak of the conflict in the Middle East, crude oil ultimately ended the first half of the year higher despite a sharp retreat in June. After making new highs to start the year, gold ultimately trended lower through most of the first half as investors contemplated the potential for interest rate hikes by central banks in response to new inflationary pressures related to higher energy prices.

The primary catalyst for early-half volatility stemmed from escalating tensions in the Middle East, which led to open conflict between the U.S. and Iran. The impacts of the war resulted in a sudden supply-side shock to global energy markets. Crude oil prices spiked into triple digits, amplifying global inflation expectations and compressing equity market multiples. Following a ceasefire agreement, supply concerns systematically receded. By June, the stabilization of critical shipping corridors led to a substantial decline in crude from its quarterly peak, mitigating inflationary pressures for the broader economy but acting as a direct headwind for energy sector equities late in the Period.

Simultaneously, a distinct structural divergence emerged within the technology and digital infrastructure sectors regarding artificial intelligence expenditures. Early in the year, investor concern intensified over the intermediate return on investment for large-scale enterprise AI infrastructure, leading to capital outflows and notable stock corrections for prominent hyperscalers. Conversely, demand for physical infrastructure and semiconductor components accelerated. Aggregate capital expenditure forecasts for primary hyperscalers were upwardly revised significantly for the full year. This aggressive capital deployment drove substantial outperformance in hardware suppliers, highlighted by historic gains for the semiconductor sector in the second quarter, which provided the primary tailwind for market-cap-weighted equity benchmarks.

The end of the half marked a broader transition in equity market leadership away from high concentration in mega-cap technology names. While cap-weighted benchmarks underwent modest consolidations, underlying market breadth expanded significantly. Capital rotated into cyclical, value, and economically sensitive sectors, led by Industrials alongside notable defensive advances in Financials and Health Care. Retail and institutional flows increasingly favored equal-weighted strategies and small-cap benchmarks, which more accurately captured the stabilizing trends of the broader underlying economy.

Fixed income markets faced consistent pressure through the first half of the year as long-term treasury yields repeatedly tested elevated thresholds due to persistent headline inflation. The monetary policy framework underwent a fundamental transition under the leadership of Federal Reserve Chair Kevin Warsh. While the committee maintained its benchmark interest rate, it discontinued the practice of providing formal forward guidance.

RECOMMENDATIONS OR REPORTS BY THE INDEPENDENT REVIEW COMMITTEE

The IRC tabled no special reports and made no extraordinary material recommendations to management of the Fund during the Period. A summary of related party transactions can be found in the Annual IRC Report to Securityholders, available on our website at www.harvestetfs.com; or on SEDAR+ at www.sedarplus.ca.

Management expense ratio before waivers or absorptions ⁴	1.12%	1.31%	1.11%	0.89%	0.82%	0.78%
Trading expense ratio ⁵	0.29%	0.22%	0.21%	0.18%	0.15%	0.31%
Portfolio turnover rate ⁶	38.94%	43.99%	45.85%	50.08%	48.65%	44.05%
Net asset value per unit	\$ 11.22	\$ 10.06	\$ 7.73	\$ 9.82	\$ 12.63	\$ 14.86
Closing Market Price (HCLN)	\$ 11.25	\$ 10.07	\$ 7.73	\$ 9.82	\$ 12.62	\$ 14.88

Explanatory Notes:

1. Net assets and distributions are based on the actual number of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the reporting period. It is not intended that the Fund's net assets per unit table act as a continuity of opening and closing net assets per unit.
2. Net assets, at the commencement of operations on January 11, 2021 was \$20.00.
3. Distributions, if any, are paid in cash. The Fund may pay additional year end distributions in the form of reinvested units that are subsequently consolidated. There is no impact on NAV per unit, however such reinvested distributions increase the cost base of units held outside of registered plans. Included in the above amounts is the reinvested distribution of \$0.17 per unit paid to unitholders of record on December 31, 2025, \$0.11 per unit paid to unitholders of record on December 31, 2024, \$0.17 per unit paid to unitholders of record on December 29, 2023, \$0.14 per unit paid to unitholders of record on December 31, 2022 and \$0.09 per unit paid to unitholders of record on December 31, 2021.
4. Management expense ratio ("MER") is based on total expenses (excluding commissions and other portfolio transaction costs) of the stated period and is expressed as an annualized percentage of the daily average net asset value during the period.
5. The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period.
6. The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate, the greater the trading costs payable by the Fund and the greater the chance of an investor receiving taxable capital gains. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

Harvest Clean Energy ETF

PAST PERFORMANCE

The performance information presented herein assumes all dividends of the Fund during the periods presented were reinvested in additional securities of the Fund. The performance information does not take into account sales, redemptions, or other charges that would have reduced returns or affected performance. Past performance of the Fund is not necessarily indicative of how it will perform in the future.

Year-by-Year Returns

The following chart presents the Fund's performance for each of the years shown. The chart shows, in percentage terms, how much an investment made on the first day of each financial year would have grown or decreased by the last day of each financial year, except for 2026 which represents the Period.

Class A

Harvest Clean Energy ETF

SUMMARY OF INVESTMENT PORTFOLIO

The major portfolio categories and top holdings of the Fund at the end of the Period are indicated in the following tables. A detailed breakdown of the Fund's holdings is available in the "Schedule of Investments" section of the Fund's interim financial statements.

As at June 30, 2026

Top 25 Holdings	% of Net Asset Value
SolarEdge Technologies, Inc.	3.8
Boralex Inc., Class A	3.5
T1 Energy Inc.	3.4
Nordex SE	3.1
Enphase Energy, Inc.	3.1
Plug Power Inc.	3.0
EnerSys	3.0
ReNew Energy Global PLC	2.9
Northland Power Inc.	2.8
Nextpower Inc.	2.8
Greenergy Renovables, S.A.	2.7
ERG S.p.A.	2.7
Sunrun Inc.	2.7
Verbio SE	2.6
Drax Group PLC	2.6
Shoals Technologies Group, Inc., Class A	2.6
Fluence Energy, Inc.	2.6
Solaria Energía y Medio Ambiente, S.A.	2.5
Corporación Acciona Energías Renovables, S.A.	2.4
