Harvest Premium Yield Treasury ETF

US Treasury Income, High Yield Through Covered Calls

November 2023

Harvest Premium Yield Treasury ETF (HPYT)

The Harvest Premium Income Treasury ETF (HPYT) provides exposure to the US Treasury fixed income market by investing in a portfolio of ETFs that predominately hold long-dated US Treasury Bonds, while incorporating a covered call strategy to generate higher levels of monthly income from its holdings.

US Treasuries are among the highest credit quality and safest government issued securities today.

This ETF aims to provide investors exposure to the credit safety and strong backing of US Government Treasuries, through its portfolio of ETFs holdings. It is focused on providing higher income potential and more tax efficient income through a covered call strategy.

US Treasuries: A Pillar of Stability

The US Treasuries, predominantly held by this portfolio of ETFs, come with the full faith backing of the US government (Federal), stand as a symbol of confidence in the investment landscape. The assurance that the government will meet its financial commitments renders these securities effectively risk-free, ensuring reliable interest payments that translate into a steady income source for investors. With a range of maturities and high liquidity, US Treasuries present effective portfolio management options and diversification benefits. Their resilience against market uncertainties and tax advantages further enhances their appeal.

- Issued by and fully backed by the US Government
- Highest quality government rated debt: AA+
- Have maturities from 10 year to 30 year and ranges in between (T-notes are typically <10 year)
- Treasury bonds are guaranteed by the federal government of the United States at maturity
- Coupons (and yields) are determined by many factors including the current interest rate environment, inflation expectations and general economic prospects

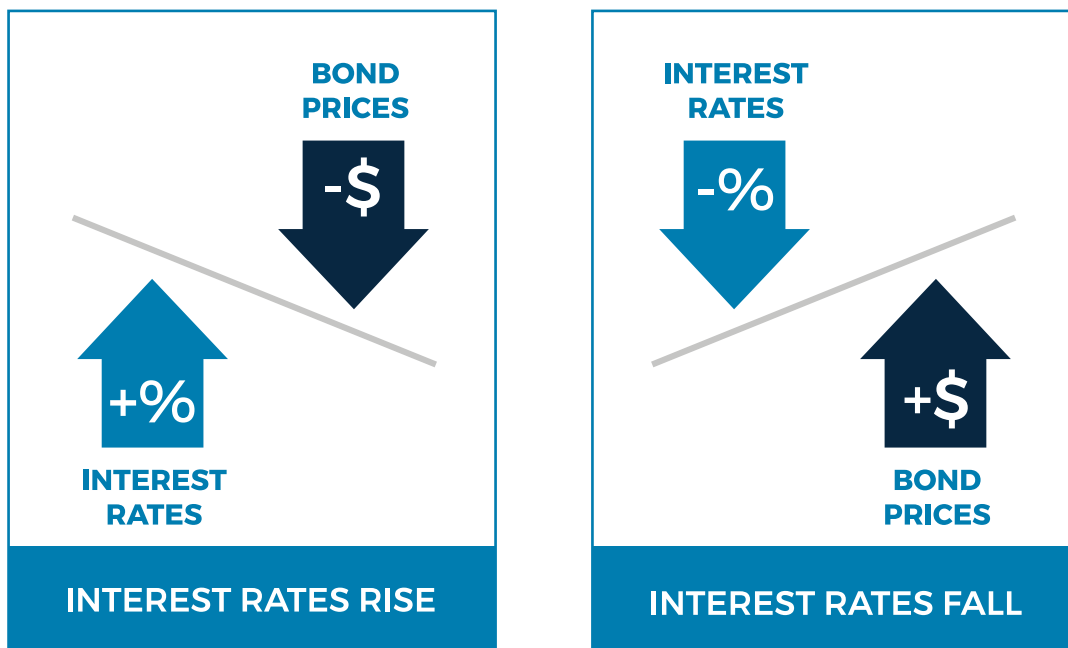

The Harvest ETFs Covered Call Strategy

At the core of HPYT investment strategy stands the Harvest ETFs' investment team - selecting a portfolio of ETFs that predominately hold long-dated treasury bonds and overlaying that with an active and flexible call option strategy, for which the team is known. This investment team has the hands on experience in deploying the option strategy and finding the appropriate mix of US Treasury based ETFs to help HPYT deliver on its investments objective.

By adding a covered call strategy, investors benefit from holding a portfolio of US Treasury ETFs, which provide a stable foundation for monthly income. Meanwhile, it garners an additional premium through the active selling of call options on those assets. This means an investor will receive high monthly distribution (potentially 3x higher than a savings or cash account) while still benefiting from the credit quality of US Treasuries held in the underlying ETFs.

Understanding Interest Rate Sensitivity

No investment is entirely without risk. For most bond investors, the primary concern is the impact of interest rate changes on the value of the bonds. When interest rates rise, the value of existing bonds with lower yields may decline because they become less attractive relative to new bonds issued at higher interest rates. But, when you complement a fixed income portfolio with a covered call strategy that can write up to 100% of the value of the underlying assets, you are effectively generating a higher yield than what you would receive from the bond interest alone, thereby changing the dynamic between interest rate movements and the value of the investment. Note too that US Treasuries are backed by the US government and mature at full value.

The Long-Term Horizon

As the economic landscape continues to evolve, in our opinion HPYT's outlook holds promise. If the period of rising interest rates subsides, the potential for both capital appreciation and income generation becomes more apparent. The strategic use of the covered call strategy, designed to navigate market fluctuations, positions HPYT favorably to seize these opportunities. That solidifies its role as a potential source of income growth.

Tax Efficiency – Tax Advantaged Distributions

HPYT presents tax-advantaged distributions in two ways. First, the capital gains on distributions, compared to those of a fixed-income ETF, are substantially lower, making it a more compelling option. Second, in order to match the equivalent pre-tax yield that HPYT can generate, one might need to venture further down the yield curve. This means shifting from investment-grade (BBB- and higher) bonds to riskier junk bonds within the fixed-income market to find comparable yields.

Stability and high income: a dual goal

HPYT diversifies its holdings and will own up to 6 US Treasury ETFs to help reduce issuer concentration risk. This diversification aids in risk management, ensuring that any potential downturns in the Treasury market can be mitigated by the income generated through the covered call strategy. This two-pronged approach provides a balance between the dependable nature of US Treasuries and the flexible use of options.

Tickers	ETF Names	Weight
TLT US	iShares 20+ Year Treasury Bond ETF	68.0%
VGLT US	Vanguard Long-Term Treasury ETF	15.4%
SPTL US	SPDR Portfolio Long Term Treasury ETF	10.0%
