Harvest Premium Yield Treasury ETF

Management Report of Fund Performance

December 31, 2024

Harvest Premium Yield Treasury ETF

PRESIDENT'S MESSAGE

Unitholder Letter March 2025

Dear Valued Investor,

Thank you for placing your trust and confidence in Harvest's investment products through 2024. Harvest ETFs invests in strong, industry-leading companies, and in secular trends. That philosophy has held strong in our ETFs and funds through the past year. We will remain committed to this philosophy going forward.

In 2024, Harvest Portfolios Group Inc. celebrated its 15th year in business. On October 23, 2009, we launched our first income-oriented equity fund – The Harvest Banks & Buildings Income Fund. It was a market traded closed-end fund at the time. Banks and REITs offered some exceptional yields at the tail end of the financial crisis. This would form the basis of Harvest's first monthly income fund. Today, it is a small mutual fund but has a steady 15-year track record of consistent monthly income.

Our company has been a steadfast equity investor. Back in late September of 2023, we expanded into the fixed income space launching two fixed income covered call ETFs that provided exposure to high-quality treasury securities, which have done well with investors. Our focus as an equity investor is grounded in taking advantage of the long-term growth in capital markets, major industries, and the growth of well-positioned and managed companies. Using our finely tuned and time-tested covered call option writing strategy we aim to generate predictable, consistent, and high levels of income for unitholders in both our Equity Income and Fixed Income ETFs.

2024 saw long-term bond rates rise more than expected due to U.S. inflationary pressures. The biggest takeaway over the past year is that expectations can change quickly and significantly over a relatively short period of time in the market. For Harvest covered call treasury ETFs, large movements in the yield curve have been challenging as the funds have longer duration exposure. However, Harvest's approach reiterates that the consistent cash flow is a critical component when bond markets are volatile. This can provide a tactical advantage during times of extreme rate movements, as portfolio managers can write more options, or less options, depending on market dynamics.

Equity markets shined through 2024, finishing in the black for the second year in a row with a 20% upward movement. That was despite a negative December 2024, where the market was impacted by many factors, including tax loss selling and policy rhetoric.

In 2024 we added yet another new category to our product lineup with the launch of Harvest High Income Shares ETFs. High Income Shares ETFs are single stock ETFs that offer exposure to top U.S. companies. These ETFs are overlaid with an active covered call strategy and seek to generate high levels of monthly income.

Harvest ETFs was again honoured the LSEG Lipper Funds Awards Canada 2024 Winner, Harvest Tech Achievers Growth & Income ETF as Best Sector Equity Fund Over 5 Years (Class U) and Best Sector Equity Fund Over 3 Years (Class B). This is the third year in a row as winner of this award. This ETF also announced the 5th and 6th distribution increase in its history.

Today, Harvest manages \$5.5 billion for Canadian investors across 45 ETF strategies with most of our products still built on long-term equity mandates with steady monthly income where we have now paid over \$1 billion of income to unitholders. We have built a 15-year pedigree of quality and award-winning products for Canadian investors and are proud of our track record.

Moving ahead to 2025, we remain steadfast to our philosophy of choosing long-term growth industries or mega-trends. Our outlook on these industries is framed by our orientation towards high quality companies and long-term trends.

Thank you again for your support and confidence in the Harvest team and our products. We will remain dedicated in our management and development of innovative and income generating products for many years to come.

Sincerely,

Signed "Michael Kovacs"

Michael Kovacs,

President and Chief Executive Officer

Harvest Premium Yield Treasury ETF

CORPORATE OVERVIEW

Harvest Portfolios Group Inc. ("Harvest" or the "Manager") manages the Harvest ETFs and is a Canadian Investment Manager founded in 2009. Harvest is focused on developing investment products that follow three investment criteria.

We (i) endeavor to develop investment products that are clear in their mandate and easy for investors to understand, (ii) strive to be transparent so that our investors can review their financial reports and know exactly what they own and (iii) seek to provide investors with consistent monthly income by investing the fund portfolios in well managed companies that have a steady cash flow and dividend-paying history.

MANAGEMENT DISCUSSION OF FUND PERFORMANCE

The annual management report of fund performance contains financial highlights but does not contain the complete annual financial statements of the Harvest Premium Yield Treasury ETF (the "Fund"). You can get a copy of the annual financial statements at your request, and at no cost, by calling toll free at 1-866-998-8298; by writing to us at Harvest ETFs, 610 Chartwell Rd, Suite 204, Oakville, Ontario, L6J 4A5; or by visiting our website at www.harvestetfs.com; or on SEDAR+ at www.sedarplus.ca.

Unitholders may also contact us using one of these methods to request a copy of the Fund's proxy voting policies and procedures, proxy voting disclosure record, or quarterly portfolio disclosure.

INVESTMENT OBJECTIVES AND STRATEGY

The Fund invests in U.S. Treasury ETFs traded on a regulated stock exchange in North America and sells covered call options on up to 100% of the its holdings with the investment objective to generate high monthly cash flow for the unitholders.

To achieve its objective, the Fund invests in ETFs that primarily hold longer dated U.S. treasury bonds. The Fund seeks to maintain a weighted average duration that is greater than 10 years, but may go lower from time to time when it is beneficial to the Fund. The Fund's allocation to the underlying ETF holdings will be driven by options liquidity, diversification, and duration.

RISK

The risks associated with investing in the Fund are as described in the prospectus. There were no material changes to the Fund over the year ended December 31, 2024 (the "Period") that affected the overall level of risk of the Fund.

RESULTS OF OPERATIONS

Overall Performance

The Fund's return by Class compared to the Solactive 10-Year U.S. Treasury Future Index^y (50%) and Solactive 20+ Year US Treasury Bond Index^y (50%) for the Period is as follows:

| | Return % |
|--|----------|
| Class A (CAD) – hedged | (5.93) |
| 50% Solactive 10-Year U.S. Treasury Future Index, 50% Solactive 20+ Year US Treasury Bond Index ^{y,y} | (6.32) |

The returns for Class B and Class U are not presented because they commenced operations on June 10, 2024 and January 11, 2024, respectively, and have not been in existence for one year.

Factors Affecting Fund Results

The Fund was impacted negatively by the uncertainty surrounding the U.S. Federal Reserve's decision to start cutting its benchmark rate. In the early part of 2024, inflation picked up (a reversal of the sharp decline at the end of 2023) leading to the speculation that rate cuts from the U.S. Federal Reserve were unlikely to materialize until later in the year. As the year progressed, economic data slowed again, and inflation data resumed cooling, leading once more to the market expecting rate cuts to actually begin in 2024.

The U.S. Federal Reserve eventually began its rate cutting cycle, but the U.S. economy seems to have held firmed, the consumer continues to spend, and inflation remains stickier at higher levels. The market has reverted to a higher for longer narrative, with the expectations being that the yield curve will normalize (short-term yields falling below long term yields) at a higher level than previously expected. In the U.S. rate cutting cycle will be shallower which has pushed long term bond yields back to the top of their range.

The result of these changing dynamics was that longer-dated U.S. Treasury Bonds saw yields oscillating back and forth in a wide range and in relatively short time frames during the Period. For example, the Period started off at approximately 4.20% on the U.S. 20 Year Treasury Bonds before moving higher than 4.95% in April 2024. By the early fall, it then fell back down to below 4.00%, and finally jumped back up over 4.90% towards the end the Period. These are material moves in the longer-bond market, especially given the duration of these bonds magnify the moves on the pricing side.

Every economic data point continues to be scrutinized by the market as investors try to pinpoint more accurately as to the degree that the U.S. Federal Reserve will cut interest rates, or when they may pause or should the economic conditions change sufficiently, even be required to increase rates. This has caused an elevated level of sensitivity to economic data sets that would not normally command such pronounced movements that were seen during the Period in the bond market.

The Fund sold call options on the Underlying ETFs during the Period to meet its investment objectives.

Harvest Premium Yield Treasury ETF

RECENT DEVELOPMENTS

Potential Impact for the Fund

In the shorter-term, the macro environment (both economic and geopolitical), while appearing to stabilize, continues to have some uncertainty. Inflationary pressures have subsided and expectations that central banks will continue to cut interest rates further have been a reprieve for broader markets. Nonetheless, inflationary pressures and the potential for fewer interest rate cuts, or even the potential for interest rate increases, and expectations can change quickly based on economic data.

Uncertainty surrounding potential policy changes from the new U.S. administration, including tariffs and geopolitical trade relations, remains a source of negative sentiment and risk within the market. There is no certainty on what policy initiatives may actually be implemented by the incoming administration and this will likely continue to be a cloud overhanging broader markets through 2025.

Israel and Hamas reached an armistice that included a hostages/prisoners exchange on January 15, 2025, giving faint hope for cooling hostilities in that region to begin the year. Meanwhile, the new administration has vowed to work to end the costly war between Russia and Ukraine.

2024 Market Review

For the Period, the broader U.S. equity markets recorded above average returns of more than 20%. This came on the back of the momentum from 2023, when the broader U.S. markets performed strongly. Back-to-back returns in the broader market of over 20% annually has only occurred a few times over the past 40+ years. Despite performing strongly, the U.S. markets did see some meaningful shorter-term corrections over the course of the review Period.

For the Period, the strong performance of the equity market was not uniform across sectors nor individual stocks. Information Technology and Communication Services posted the best returns of all sectors in the first six months of the Period. Within these two leading sectors, returns were highly concentrated in a few large companies. This saw market capitalization weighted indexes being heavily influenced by above average performance in a relatively small number of mega-cap stocks, particularly those perceived as beneficiaries of investment in artificial intelligence ("AI") focused infrastructure. While select large companies were a key driver of the overall market performance during the first half, owing to their strong relative performances and sizes, the breadth of participation across stocks and sectors expanded over the course of the Period with all the 11 main sectors in the U.S. posting positive returns.

In the Fixed Income market, U.S. Treasury 10-Year Bond Yields moved modestly higher early in 2024, bouncing back from over-sold conditions coming into the end of 2023. For the review Period, the fixed income market, like the equity market, was sensitive to any new data that signaled, or failed to signal, the end of the U.S. Federal Reserve (the "Fed") restrictive monetary policy. For example, in April, new data showed that inflation was still strong. This caused long-term bond yields to move higher and the equity market to pull back. In the months that immediately followed, new data showed that inflation was subsiding. This resulted in a reversal of the pullback in both the bond and equity markets.

As additional data was unveiled through the early fall, we saw stabilization across the economic data and validation through improving corporate earnings. Further, stronger earnings guidance gave rise to improved sentiment and a rebound in equities. Most notably, there was broader market participation across the various sub-sectors and within sub-sectors. Amidst the recovery in stocks and improving economic strength, there were growing inflationary metrics that triggered concerns that the Fed may reduce the number of interest rate cuts over the coming year. This put upward pressure on longer dated interest rates during this time.

Following the U.S. election results in early November, markets continued to move higher as the election results eliminated an uncertainty that had been prevalent in the market. However, that was quickly followed by rhetoric surrounding tariffs that instilled policy concerns across the market. This caused volatility in the equity markets at the end of the Period. Given the fact that many of the proposed tariff policies would likely be inflationary, this added to further speculation that inflation pressures will be forthcoming through 2025. It also served to push longer dated bond yields higher, and changed expectations for the number of Fed's cuts in interest rates expected during 2025. This caused bond prices across durations to come under pressure during the latter part of the Period.

With economic data moderating more quickly in Canada than the U.S., the Bank of Canada ("BoC") announced an interest rate cut in June. This was the first in four years, and the first G7 country to do so this economic cycle. The BoC continued to cut its overnight lending rate for a total of seven effective 0.25% cuts during the Period.

Geopolitical tensions worsened in key regions of the globe during the Period. Specifically, ongoing wars in Eastern Europe and in the Middle East were a source of headline risks during and post the end of the Period. The ongoing geopolitical tensions during the Period did provide some support to safe-haven assets such as gold and helped to keep global oil prices trading in relatively high ranges. However, the broader markets were less sensitive to the daily headlines compared to the previous years, even though these headlines remain a source of risks for them.

Other

Class U of the Fund commenced operations on January 11, 2024 with 100,000 Class U units at \$12.00 USD for proceeds of \$1,200,000 USD and began trading following the listing of its units on January 16, 2024. Class B of the Fund commenced operations on June 10, 2024 with 100,000 Class B units at \$11.00 for proceeds of \$1,100,000 and began trading following the listing of its units on June 12, 2024.

RELATED PARTY TRANSACTIONS AND OTHER EXPENSES

Management fees

The Manager is responsible for managing the Fund's overall business and operations and provides key management personnel to the Fund. The Fund pays the Manager an annual management fee of 0.45%, plus applicable taxes, based on a percentage of the average daily net asset value ("NAV") of the Fund charged daily and paid monthly. However, the Fund may invest in an underlying ETF that will pay management fees and incur operating and trading expenses. If the Fund invests in ETFs that are managed by the Manager, no management fees or incentive fees are payable by the Fund that, to a reasonable person, would duplicate a fee payable by such underlying ETFs for the same service. The underlying ETFs in which the Fund invests will pay applicable management fees, and reimburse the Fund accordingly with a Management Fee Distribution. As a result, the actual aggregate management fees indirectly payable to the Manager in respect of an investment in the Fund should be nil.

Harvest Premium Yield Treasury ETF

The Manager may, in its discretion, agree to charge the Fund and/or certain unitholders a reduced management fee as compared with the management fee that it otherwise would be entitled to receive, provided that the amount of the reduced management fee is distributed periodically by the Fund to the unitholder as a management fee distribution. Any reduction will depend on a number of factors, including the amount of account activity. Any tax consequences of a management fee distribution will generally be borne by the unitholder who receives the distribution.

Operating expenses

The Fund is responsible for operating expenses relating to the carrying on of its business, including custodial services, interest, taxes, legal, audit fees, transfer agency services relating to the issue and redemption of units, and the cost of financial and other reports, costs and expenses for the Fund's Independent Review Committee ("IRC"), including fees and expenses of the IRC members and compliance with applicable laws, regulations and policies. The Manager pays for such expenses on behalf of the Fund, except for certain expenses such as interest, and is then reimbursed by the Fund.

Other expenses

The Manager will be reimbursed by the Fund for all reasonable costs, expenses and liabilities incurred by the Manager for performance of services on behalf of the Fund in connection with the discharge by the Manager of its duties hereunder. Such costs and expenses may include, without limitation: mailing and printing expenses for reports to unitholders and other unitholder communications; a reasonable allocation of salaries and benefits; and other administrative expenses and costs incurred in connection with the Fund's continuous public offering and other obligations. These expenses are allocated by the Manager on a reasonable basis, across all the Harvest Portfolios Group Inc. funds, and classes of each applicable fund. These expenses were \$76,486 for the Period and are included in the unitholder reporting costs on the Statement of Comprehensive Income (Loss) in the financial statements.

Waivers and absorptions

At its sole discretion, the Manager may waive management fees or absorb expenses of the Fund. There were no management fee waivers for the Period. The Manager absorbed \$141,140 of expenses of the Fund for the Period. The Manager may cease doing so at any time without notice to unitholders.

The management expense ratios of the Fund with and without the waivers and absorptions are reported in the Ratios and Supplemental Data table below.

Other transactions

Officers, directors and related entities of the Manager invest in units of the Fund from time to time in the normal course of business and on the same basis as arm's length investors. As at December 31, 2024 officers and directors owned 38,972 units of the Fund.

Other funds that are also managed by the Manager owned the following percentage of the NAV of the Fund:

| | % net assets |
|-------------------|---------------------|
| December 31, 2024 | 0.2 |

RECOMMENDATIONS OR REPORTS BY THE INDEPENDENT REVIEW COMMITTEE

The IRC tabled no special reports and made no extraordinary material recommendations to management of the Fund during the Period.

Harvest Premium Yield Treasury ETF

FINANCIAL HIGHLIGHTS

The following tables present selected key financial information about the Fund and are intended to help you understand the Fund's financial performance for the Period and past annual periods. This information is derived from the Fund's annual audited financial statements.

Class A

| THE FUND'S NET ASSETS PER UNIT | 2024 | 2023 |
|--|------------------|------------------|
| Net assets - beginning of the period² | \$ 12.11 | \$ 12.00 |

| Net asset value per unit | \$ 14.28 |
| Net asset value per unit (USD) | \$ 9.93 |
| Closing market price - USD (HPYT.U) | \$ 9.94 |

Explanatory Notes:

1. Net assets and distributions are based on the actual number of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the reporting period. It is not intended that the Fund's net assets per unit table act as a continuity of opening and closing net assets per unit.
2. Net assets, at the commencement of operations on September 26, 2023 was \$12.00 for Class A. Class U commenced operations on January 11, 2024 with a net asset value per unit of \$12.00 USD. Class B commenced operations on June 10, 2024 with a net asset value per unit of \$11.00.
3. Distributions, if any, are paid in cash. The Fund may pay additional year end distributions in the form of reinvested units that are subsequently consolidated. There is no impact on NAV per unit, however such reinvested distributions increase the cost base of units held outside of registered plans.
4. Management expense ratio ("MER") is based on total expenses (excluding commissions and other portfolio transaction costs) of the stated period and is expressed as an annualized percentage of the daily average net asset value during the period.
5. The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period.
6. The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate, the greater the trading costs payable by the Fund and the greater the chance of an investor receiving taxable capital gains. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

Harvest Premium Yield Treasury ETF

PAST PERFORMANCE

The performance information presented herein assumes all dividends of the Fund during the periods presented were reinvested in additional securities of the Fund. The performance information does not take into account sales, redemptions, or other charges that would have reduced returns or affected performance. Past performance of the Fund is not necessarily indicative of how it will perform in the future.

The performance of Class B and Class U are not shown as National Instrument 81-106, the regulatory guideline for Continuous Disclosure, does not permit reporting of performance for any investment fund that has been in existence less than one year.

Year-by-Year Returns

The following chart presents the Fund's performance for each of the years shown and illustrate how the Fund's performance varied for Class A. The chart shows, in percentage terms, how much an investment made on the first day of each financial year would have grown or decreased by the last day of each financial year.

Class A

Annual Compound Returns

The following table shows the annual compound returns for the Fund. All returns are in Canadian dollars, unless otherwise specified, on a total return basis, net of fees.

For comparison purposes, the Solactive 10-Year U.S. Treasury Future Index^y (50%) and Solactive 20+ Year US Treasury Bond Index^y (50%) is used. While the Fund uses this benchmark for long-term performance comparisons, it is not managed relative to the composition of this benchmark. As a result, the Fund may experience periods when its performance is not aligned with this benchmark, either positively or negatively. The return of this benchmark is calculated without the deduction of management fees and fund expenses whereas the performance of the Fund is calculated after deducting such fees and expenses. Please see the "Results of Operations" section of this report for a discussion on recent performance.

| Investment Return % | 1 Year | 3 Years | 5 Years | 10 Years | Since Inception [‡] |
